Subject: peripheral canal

My name is Roger Lang and I am a dentist in Stockton , California---have a business and residence in Stockton--I am very concerned about diverting water around the San Joaquin Valley and ask that with any of your influence, that this canal not become a realty. California has historically been high desert and to change this natural set-up so more people can live in areas that were not designed for a large population does not make common sense. I know many farmers that have grave concerns on water quality and amount available in the future and this areas main product is agriculture. Long term vision has not been taken by the govenor and other parties involved. Please pass this on to all concerned on my behalf as I oppose this canal at any time, sincerely Roger
